

Aligning Defog To Your Usecase

Aligning Defog to your usecase

You can give Defog more context about your metadata and align its behaviour to your organization. This helps Defog generate accurate results for you and your team, even when specialized knowledge is required.

There are three ways to align Defog to your usecase:

- [Instructions](#)
- [Golden Queries](#)
- [User Feedback](#)

Add Instructions

i Instructions are a way to guide Defog on business rules or internal logic that is not captured in your schema. You can add instructions on specific terminology, calculations, or any other business logic that is not captured in your schema.

Go to the **Align Model** page from the navbar. Add your instructions as bullet points or paragraphs. You can also add examples to help Defog understand your instructions better. Click on **Update Instructions** once you have added your instructions.

Instructions

These instructions are used by the model as a guide for the SQL queries that it generates. You can change them below.

- when asked about users, always show me the username as well as their city along with other columns
- when asked about popular or top events, show the events based on the revenue and not the number of tickets
- if asked for top quartile of users, look at the top 25% of users by spend. to get the threshold that represents the top quartile, you can use `'percentile_cont(0.75)'`

Update Instructions

Add Golden Queries

i Golden queries are pairs of user questions and SQL queries that you know are correct and want Defog to learn from.

You can view, add and edit golden queries in the **Align Model** page from the navbar. To add a new golden query, click on **Add new Question and Query** and fill in the user question. Defog will generate a SQL query, which you can edit if you'd like to make any changes. Below the query, you can also see the column names that would be displayed once the query is executed.

Click on **OK** to save it as a golden query. You can come back and edit or delete the golden queries anytime.

Add Golden Query

Question: How many users did we have in the last 6 months

```
SELECT b.username,  
       b.city,  
       COUNT(b.buyerid) AS user_count  
FROM buyer AS b  
JOIN sale AS s  
  ON b.buyerid = s.buyerid  
WHERE s.saletime >= (CURRENT_DATE - INTERVAL '6 months')  
GROUP BY b.username,  
         b.city  
ORDER BY user_count DESC NULLS LAST
```

username

city

user_count

OK

Collect User Feedback

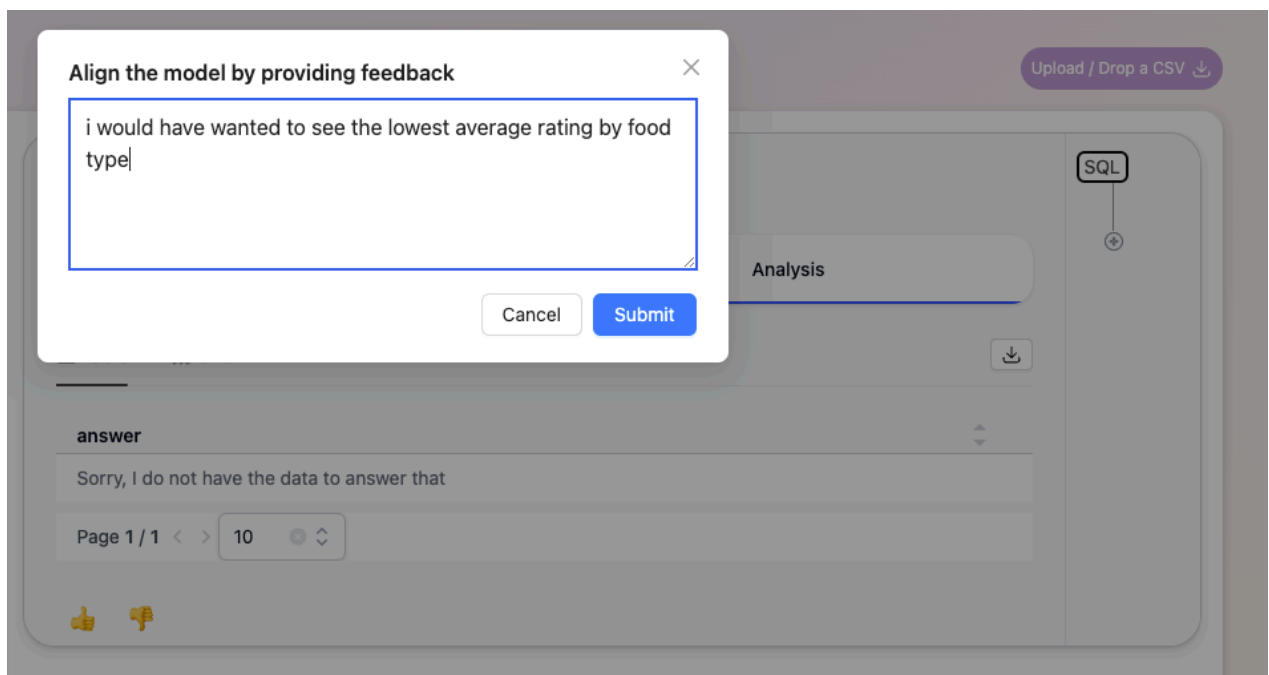

You can collect user feedback on the results generated by Defog. This feedback helps Defog learn from its mistakes and improve its results.

1 Give feedback via the UI

After running a query, you can give feedback on the results by clicking on the thumbs up or thumbs down icon. This feedback is used to improve the model.

If you have positive feedback, click on the thumbs up icon. If you have negative feedback, click on the thumbs down icon and add a comment to explain your feedback.

2 Add queries marked as good to golden queries

On the View Feedback page, you can see all the feedback given by users. Queries that have been marked as correct can be added to the golden queries. This helps Defog learn from the correct queries and generate better results in the future.

 Manage Database Manage Users Manage tools Check Readiness Align Model View Feedback Query Data Logout					
 Feedback History					
Filter rows by text					
Timestamp	Type	Question	Generated SQL Query	Feedback Text	Recommendation
Aug 19, 11:01 PM	Bad	what is the worst food	SELECT 'Sorry, I do not have the data to answer that' AS answer	i would have wanted to see the lowest average rating by food type	Improve using Feedback
Aug 19, 11:01 PM	Good	what is the average rating by food type	SELECT r.food_type, AVG (r.rating) AS average_rating FROM restaurant AS r GROUP BY r.food_type ORDER BY average_rating DESC NULLS LAST		Add to Golden Queries
Aug 19, 10:53 PM	Bad	what is the rating by city	SELECT r.city_name, AVG (r.rating) AS average_rating FROM restaurant AS r GROUP BY r.city_name ORDER BY average_rating DESC NULLS LAST	well this was good, but i'm just testing	Improve using Feedback
Aug 19, 10:48 PM	Good	what is the average rating by city?	SELECT r.city_name, AVG (r.rating) AS average_rating FROM restaurant AS r GROUP BY r.city_name ORDER BY average_rating DESC NULLS LAST		Add to Golden Queries

3 Get recommendations for creating instructions that address negative feedback

You can also get recommendations for creating instructions that address the negative feedback. Click on the **Improve using Feedback** button to get suggestions on what instructions you can add to improve the model.
