

Querying Your Data

Query your data

Once you have setup your metadata, you can start asking questions about your data on the **Query Data** page.

Getting started

Start asking questions

Just type in your question in the search bar to get started. In the results, you will see the relevant data to answer your question. By default, Defog shows the results as a table, but you can also view the results as a chart by clicking on the **Chart** tab.

The screenshot displays the Defog Query Data interface. On the left, a sidebar contains three tabs: 'Analysis' (selected), 'View data structure', and 'Preview data'. The 'Analysis' tab shows a 'History' section with a query 'Who are the top 10 users' and a 'New +' button. The main area shows the results for this query. At the top, it says 'Who are the top 10 users' and 'Was this your desired result?' with thumbs up/down icons and a 'Fetch' button. Below this are two tabs: 'SQL/Code' and 'Analysis' (selected). Under the 'Analysis' tab, there are two sub-tabs: 'Table' (selected) and 'Chart'. The 'Table' tab displays a table with three columns: 'username', 'city', and 'total_spend'. The table contains 10 rows of data. At the bottom of the table, there is an 'Advanced' toggle switch and a text input field with the placeholder 'Type your next question here', followed by an 'Ask' button.

username	city	total_spend
LXF16RPG	Wheaton	46,710
YHF13OYW	Columbia	46,570
BWV25SNA	Alameda	45,684
CKM68QQM	Portland	45,414
KUP01TZN	Annapolis	40,943
KKP03ZWN	Syracuse	37,693
VIQ49BWN	Trenton	37,566
XBC58CST	Lawrenceville	36,885
QBH96DJM	Lawrenceville	36,885

View results as code

You can also view the results as code by clicking on the **SQL/Code** tab. This will show you the code that was generated and executed on your database to get the results. If you would like to edit the SQL and run it directly from here, you can do so by just editing the SQL and clicking on the **Re run** button.

Who are the top 10 users Was this your desired result?

SQL/Code Analysis

Fetch data from db Re run Delete

INPUTS

String question

OUTPUTS

answer

SQL

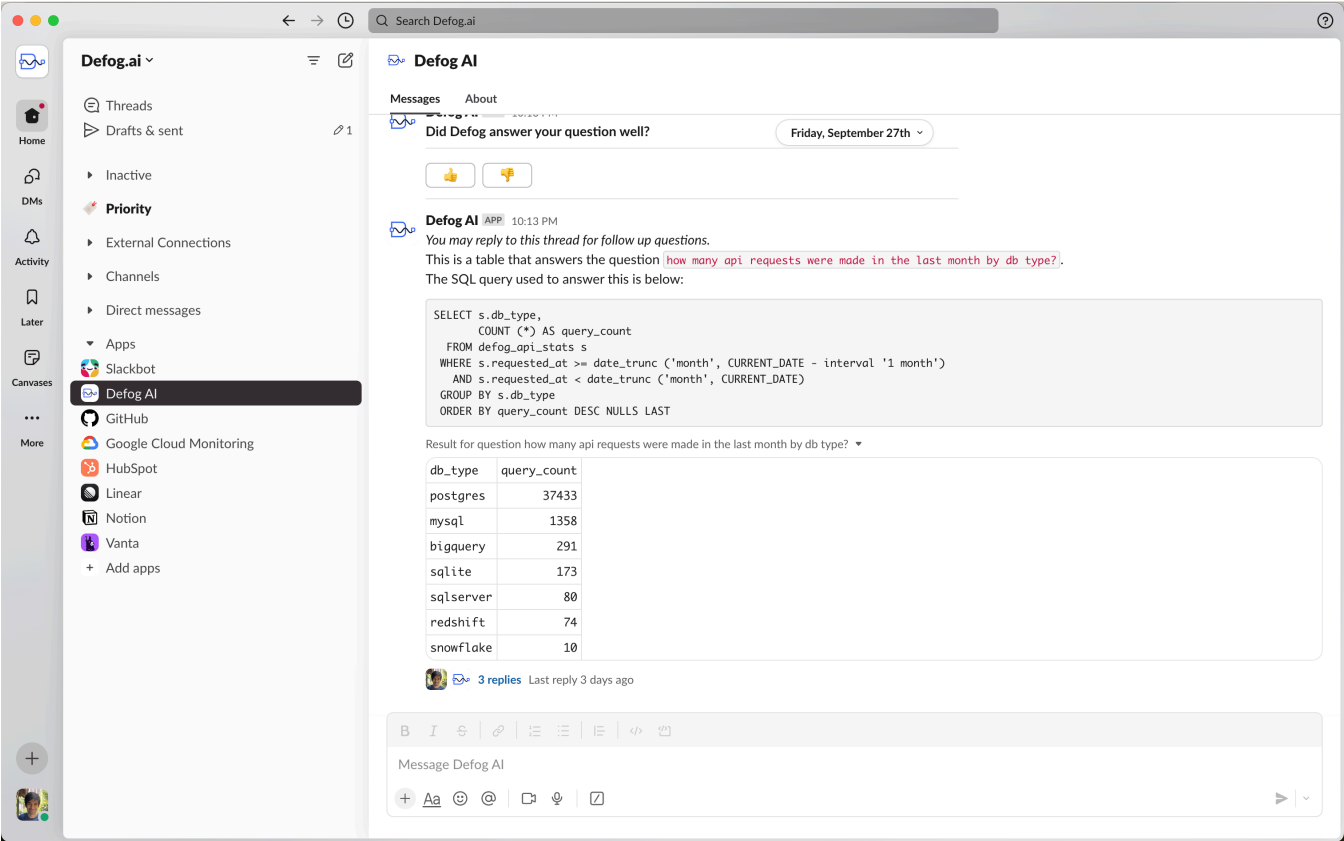

```
SELECT b.username,
       b.city,
       SUM (s.pricepaid) AS total_spend
FROM buyer AS b
JOIN sale AS s
ON b.buyerid = s.buyerid
GROUP BY b.username,
         b.city
ORDER BY total_spend
LIMIT 10
```

☐ Advanced Ask

Fetch

Ask questions from Slack

You can also ask questions from Slack by installing a Slack app. Instructions for how to do this are coming soon.

Advanced questions

Defog's Advanced Mode lets users ask more complex questions, such as performing stastical analysis. You can switch to Advanced Mode by switching to **Advanced** in the search bar.
